

NAMEET AHIRE

nameet.7800@gmail.com · +91 9689217478
LinkedIn : nameet-ahire · GitHub : NameetAhire

SKILLS

Languages & Frameworks: Python · JavaScript · HTML5/CSS3 · Flask · Django · React · Express.js

AI/ML & Computer Vision: YOLO v8 · OpenCV · TensorFlow · PyTorch · NumPy · Pandas

Cloud & DevOps: AWS (EC2, S3, RDS) · GCP · Docker · Git · Linux · MySQL

Security Concepts & Tools: JWT Authentication · Cryptography (AES, RSA, bcrypt) · RBAC · Wireshark · Nmap · Postman · Power BI

EDUCATION

Master of Technology in Computer Engineering

Sardar Patel Institute of Technology (SPIT)

Pursuing

CGPA: 9.55/10

Bachelor of Engineering in Computer Engineering

MCT Rajiv Gandhi Institute of Technology

Graduated July 2024

CGPA: 8.82/10

KEY PROJECTS

Cloud-Native Learning Management System (LMS) | *Express.js, React, Docker, AWS*

April 2026 – May 2026

- Architected a containerized full-stack LMS platform leveraging an Express.js backend, React.js user interface, and MongoDB Atlas database cluster.
- Implemented granular role-based access control (RBAC) layers secured via stateless JWT authentication tokens and cryptographic bcrypt password hashing.
- Containerized distinct application microservices using Docker and Docker Compose to isolate runtime environments and guarantee immutable deployment structures.
- Engineered cloud deployment workflows on AWS EC2 (Ubuntu 22.04), utilizing Amazon S3 buckets for highly scalable decoupled static asset hosting.

SecureCheck - Dark Web Threat Intelligence Engine | *Flask, Pandas, REST APIs, Tailwind CSS*

January 2026 – February 2026

- Engineered an event-driven threat intelligence scanner web application utilizing a Python Flask framework backend to detect and isolate compromised credential sets.
- Developed high-performance hybrid query logic merging millions of local CSV file data records via Pandas with real-time intelligence data fetched from external REST APIs.
- Formulated a streamlined reporting dashboard interface using Tailwind CSS to cleanly present severity matrix analytics, corporate vulnerability levels, and data breach timelines.

Intelligent Road Incident Detection System | *YOLO v8, OpenCV, PyTorch, Streamlit*

June 2023 – April 2024

- Built a real-time computer vision deep learning pipeline using YOLO v8 and OpenCV models to dynamically flag accidents, fires, and safety hazards with 96% validation accuracy.
- Optimized tensor graph training hyperparameters and input processing logic to ensure low-latency frame rates during live object tracking routines.
- Deployed a lightweight, end-to-end operational full-stack Streamlit application architecture capable of processing concurrent live video data feeds efficiently.

CERTIFICATIONS

AWS Cloud Badges:

Cloud CI/CD Pipelines (May 2026) · Cloud Architecture (Apr-May 2026) · Cloud Foundation (Apr 2026)

Google Cloud Career Readiness Associate:

Data Analyst Track (Mar-Apr 2024) · Cloud Engineer Track (Aug-Sep 2023)
